

Make it in America: Support H.R. 4692, the National Manufacturing Strategy Act of 2010

- Although there are numerous federal programs to support U.S. manufacturing, overall our manufacturing policy is disjointed, ad hoc, and reactive. Meanwhile, manufacturers in other countries benefit from more focused policymaking.
- Under the National Manufacturing Strategy Act of 2010, introduced by Rep. Daniel Lipinski, the President will submit to Congress a National Manufacturing Strategy every 4 years in consultation with a newly established Manufacturing Strategy Board, which will conduct an in-depth analysis of the nation's manufacturing sector and develop a comprehensive strategy for enhancing its competitiveness and promoting its success in the global economy.
- The Manufacturing Strategy Board will consist of 21 industry leaders and stakeholders from across the country, representing businesses both large and small.
- The aim of the strategy is to harmonize manufacturing policy across the government and ensure that it is unified, coherent, forward-looking, and results-oriented.
